

## Digital access control via web is just a click away with CISA Aero

FAENZA (October 1, 2020)

For some time now, CISA, an Allegion Group company, has been carrying out a smart technological evolution aimed at creating simple and convenient solutions that make life simple for small businesses. This is the philosophy behind **CISA Aero, a platform that enables to create contactless credentials for digital access management via web**, without the need for a dedicated software or digital expertise. The system works with CISA electronic doorhandles and can be fitted on fire doors and emergency exits in compliance with European Regulations.

Users simply access CISA's cloud platform from their browser using strictly personal credentials and manage the whole operation in a few clicks with the help of the intuitive interface. All critical data is saved on the cloud, where it is protected from security breaches and is accessible at all times.

There are many advantages to the solution, especially for small commercial businesses, as explained by Marco Zavatta, Electronic Solutions Platform Lead:

*“CISA Aero makes access management safe and flexible, something that is very important for constantly evolving small businesses. For example, it enables to trace every access log by employees, preventing entry outside authorized hours, and to quickly cancel credentials to block unauthorized access. In the case of temporary users inside communal spaces, it allows to set up the card to authorize access only to selected areas at certain times. As a result, **staff and business management gains stronger efficiency and security.**”*

CISA Aero gives small business facilities **all the functionalities of a management software without the costs:**

- **Immediate cancellation of credentials in the case of theft or loss**, thus saving time and money on key and cylinder replacement.
- **Set up of time and space restrictions** to prevent unauthorized access.
- **Access log** to trace entries (date, time, credentials used, access granted/denied).
- **Extensible system** to increase the number of users and entry points at any moment.

The system can be combined with contactless wall readers, electronic door handles and cylinders for fully integrated and completely digital access control.

CISA, a brand of Allegion, is one of Europe's leading providers of security and access control systems. Since its foundation in 1926, it plays a primary role in satisfying the security requirements of any type of building with dedicated electro-mechanical solutions, which enable real-time access control and management. Whether it's residential homes or business centers, schools or health and hospitality facilities, safety is our main concern. For more, visit [cisa.com](https://www.cisa.com)
